

# Faster Fastener Removal

The new e·drill CG (center ground) from Perfect Point

The new e·drill CG offers improved performance over a wide range of aerospace fastener sizes. Quickly removes 5/32" to 3/8" standard and oversize fasteners.

1. New high visibility adapters and guides with improved mounting interface.
2. Removes fasteners at least 5 times faster than conventional drilling, cut geometry reduces punchout force.
3. The forceless process means improved ergonomics, eliminates noise, vibration and force common in conventional drilling.
4. Eliminates sharp drill shard FOD (foreign object debris). Collection of FOD from aircraft is much faster, easier and safer.
5. Air frame safe. 90% + reduction in damage rates.
