E-Drill Leasing Options Now Available Through Perfect Point EDM and Carolina GSE Partnership

Huntington Beach, CA – January 25, 2021 – Perfect Point EDM Corporation, the manufacturer of E-Drill - the revolutionary fastener removal technology used in maintenance, repair and overhaul operations, and Carolina GSE, a global provider of aviation ground support equipment solutions, announce a strategic partnership to bring E-Drill to more businesses in the Aerospace industry by providing flexible leasing options.

The widespread struggles of the Aerospace industry through 2020 have proven that the need to focus on productivity and efficiency improvements are required now more than ever. Perfect Point and Carolina GSE are working together to help MRO operators increase throughput by providing flexible leasing options for the E-Drill, an innovative and effective solution to the tedious fastener removal process.

E-Drill utilizes a handheld, force-less Electro-Discharge-Machining (EDM) process to remove hard-metal fasteners in seconds. Compared to traditional processes, E-Drill yields 20x productivity improvements, drives up first-pass quality, reduces the cost of consumables, increases throughput and protects workers.

“Prospective customers have long asked for alternative options to bring an E-Drill into their shop. It’s an effective tool that most MRO firms have a clear need for, but some struggle to find room in their capital budget to finalize the purchase in a timely manner.” Said Perfect Point’s General Manager, Jim Becker. “With these new leasing options, we’re trying to make it easier than ever for businesses to acquire and start utilizing E-Drill in their standard processes.”

About Perfect Point - Perfect Point EDM Corporation (PPEDM) is a privately funded corporation, located in Huntington Beach, California, founded in October 2005 to capitalize on our unique, patented Electro-Discharge-Machining (EDM) technology. Perfect Point is a leading manufacturer and supplier serving the aerospace industry with unique and advanced tools for aircraft maintenance, repair and overhaul operations. The company has introduced two game changing, innovative products, E-Drill and S-Blaster®, to the Aerospace Industry.

About Carolina GSE - Carolina GSE is based in New Bern, North Carolina, and is a trusted global leader in providing diverse categories of ground support equipment and offering extensive repair and overhaul services. Carolina GSE's product line has expanded to include avionics and FDR/CVR testing and readout equipment. Carolina GSE was founded in 2001 to serve individual aircraft owners, corporate flight departments, FBOs, maintenance facilities (MROs), military, and commercial airlines.
